Main Product	Main Product	Main Product	Main Product
Ball bearings, rod-end bearings, spherical bearings, fasteners, pivot assemblies	HDD spindle motors, stepping motors, fan motors, DC motors, LED backlights, resonant devices, sensing devices	Precision components, optical devices, power supplies, mechanical components, automotive products, analog semiconductors	Automotive parts (door latches, door handles, etc.) industrial machinery components, components for home security units

Project Achievement / Technical Expertise

Our company has developed high-efficiency LED streetlights with wireless function and has been working on a "smart city" projects since 2015. By centrally managing these streetlights in the cloud, it is possible to monitor and control lighting time and power consumption. Additionally, by combining various sensors (environmental sensors, parking sensors, flood sensors, etc.) and surveillance cameras, we are developing systems that can control functions related to urban life and utilize detected data. We continue to take on the challenge of evolving lighting equipment into devices that not only provide light but also have a variety of added values, such as energy savings, improved convenience for urban life, and improved safety.
