Maintenance Equipment

-Road Cutter/ Road Stabilizer-

Hand operated Compactor

-Walk-behind Roller/ Plate-Compactor, Rammer

Project Achievement / Technical Expertise

Almost a century ago, SAKAI HEAVY INDUSTRIES, LTD. introduced the very first road roller ever built in Japan. As pioneers in road construction equipment, we have consistently strived to innovate our products through technological research, aiming to meet the ever-increasing demands for high-quality infrastructure technology in road construction and maintenance.

Furthermore, we are committed to our proposal to facilitate technology transfer to civil engineers in developing countries. Our goal is to empower them to independently manage road construction and maintenance using our Road Stabilizer, enabling them to develop their skills in this field.

The Road Stabilizing Construction Method
